

Dibyajyoti Pradhan

Senior Software Engineer | Driving Development at Meta, HubSpot & Amazon | London, United Kingdom

+44-7790779177 dibyajyotipradhan.official@gmail.com [LinkedIn](#) [GitHub](#) [Portfolio](#)

Summary

Senior Software Engineer with 7+ years at Meta, Amazon, and HubSpot, specialising in trust, governance, and safety platforms: approval workflows, audit logging, abuse detection, and LLM-powered tooling with human-in-the-loop controls. Deep backend and distributed-systems foundation with a record of shipping production AI agents at enterprise scale and partnering with security, privacy, and legal stakeholders.

Skills

- **Languages:** Java, Python, TypeScript, JavaScript, C, C++, Hack, SQL
- **Frameworks:** React, React Native, Spring, Guice, Dagger 2.0, CHIRP RPC, GraphQL
- **AI:** LLM Integration (GPT-4o, Claude), Agents & Tool-Use Design, Prompt Engineering, Evals; daily Claude Code, Cursor, Copilot
- **Infrastructure:** Kafka, Docker, Kubernetes, AWS, Memcached, CI/CD, Git
- **Databases:** MySQL, PostgreSQL, MongoDB, DynamoDB, Vitess DB
- **Other:** System Design, Distributed Systems, Event-Driven Architecture, Microservices, REST APIs, Incident Response

Achievements

- **GenAI Implementation:** Introduced GenAI (Llama 2) for Ad Creatives in AMA, enhancing ad creative capabilities.
- **Innovation Award:** Received the “Most Innovative Award” at the Amazon Pay EDH Hackathon for pioneering a near-zero latency model for the Amazon Pay For Business App.
- **Scholarship Recognition:** Recognized with the Jagadis Bose National Talent Search Scholarship, selected as one of 56 scholars from over 3000 applicants from top-tier colleges.

Education

Professional Certificate in Machine Learning & AI

Imperial College London

2025 – 2026 *In Progress · 25 Weeks*

Curriculum: Supervised/Unsupervised Learning, Neural Networks, Deep Learning, NLP, Reinforcement Learning, Recommender Systems, Deployment

Capstone Projects: *Hull Tactical — S&P 500 Market Prediction* (classification models on financial data); *Black-Box Optimisation* (Bayesian optimisation with Gaussian Process surrogates)

Bachelor of Engineering in Electronics & Telecommunication Engineering

Jadavpur University

2015 – 2019 *Kolkata, India*

Experience

HubSpot Senior Software Engineer

07/2024 – Present

London, United Kingdom

- Designed and delivered an AI-powered approval automation platform for 40k+ up-market portals, cutting pre-review latency from 72-minute median decision cycles to seconds — Breeze AI agents, Kafka/TQ2 event-driven orchestration, secure state validation, auditability, and human-in-the-loop controls.
- Architected GPT-4 powered audit log summarisation and the AuditTools assistant — natural-language queries via LLM filter extraction, JinJava templating, Memcached caching — cutting enterprise security investigations from hours to minutes across 100k+ events with sub-second responses.
- Built the audit log security alerts system detecting abuse patterns (brute-force logins, bulk exports, admin permission revocations) on a platform ingesting tens of millions of events daily — adaptive statistical thresholds (mean + 3 σ per portal) and idempotent notification delivery.
- Migrated approval event emission to async (Kafka WBL + task queues) via shadow-mode rollout, eliminating 30s request-thread blocking (90% faster).

Meta Software Engineer II

04/2022 – 05/2024

London, United Kingdom

- Led mid-flight recommendation flows (Placements, Campaign Budget) in the Ads Manager App end-to-end — hypothesis, XFN design, experimentation — delivering a 0.04% top-line revenue lift and 12,000+ weekly resolutions; #1 adopted recommendation.
- Platformised instant resolution flows (new-flow build time $\sim$ 3 weeks $\rightarrow$ 3–4 days); improved screen load times 20% across 8 high-traffic surfaces via Relay query pre-fetching.
- Revamped the ad duplication flow to align with ODAX objectives — 14% revenue increase, 18% growth in duplications.

Amazon Software Development Engineer – 2

10/2021 – 02/2022

Hyderabad, India

- Expanded user base of Amazon Pay for Business app by 5 million downloads and achieved a 4.3-star rating from launch. Optimized latency and resolved operational inefficiencies.
- Engineered an innovative ‘Offline Architecture’ for the app, eliminating perceived latency.
- Streamlined crawler latency in Daily MIS Settlement Report, reducing processing time from 3 hours to 10 minutes, resolving delays for 70+ online and organized merchants.

Amazon

Software Development Engineer – 1

07/2019 – 09/2021

Hyderabad, India

- Orchestrated the development of 18 major pages for the Amazon Pay for Business app.
- Played the founding engineer role in a team of three, facilitating 5 million merchant engagements at launch.

Amazon

Software Development Engineer – Intern

05/2018 – 07/2018

Hyderabad, India

- Developed automation for sequence generation in a tier-1 service, benefiting over 100 developer teams in Amazon.
- Created a comprehensive full-stack admin tool to monitor and manage sequence configurations in real-time.
